Fifteen years ago, Derek and Monica established the world's biggest study of giraffes, based in the savannas of northern Tanzania. Using cutting-edge computer vision technologies, these researchers recognize thousands of individual giraffes by their unique spot patterns and track them over their lifetimes to understand what helps or hurts these magnificent creatures and to guide conservation efforts. They also created the 'Celebrating Africa's Giants' environmental education program to inspire the next generation of Tanzanian conservationists. A native Californian, Dr. Wynn-Grant attributes her interest in wildlife and conservation from the nature shows she watched on television as a child, and today she uses media to increase representation of Black scientists and explorers.
